Training Courses — RIPE Network Coordination Centre

IPv6 We distribute IPv6 addresses according to policies developed by the RIPE community. IPv6 provides enough addresses to allow the Internet to continue to expand and the industry to innovate. It is not, however, directly compatible with IPv4, meaning that a device connected via IPv4 cannot communicate directly with a device connected using IPv6.

IPv6 — RIPE Network Coordination Centre

RIPE NCC Basic IPv6 Training Course. On Sunday, 23 October 2016, the RIPE NCC Training Department will organise a full-day Basic IPv6 Training Course. The course is free and will also take place at the Meliá Castilla hotel in Madrid. After taking this course, you will be able to understand the implications of running out of available IPv4 address space and be able to create a deployment plan for IPv6.

Basic Connectivity These tags indicate whether RIPE Atlas believes a probe works or does not work on IPv4 or IPv6. A probe is considered to work on a particular IP version if it has at least one succesful ping result for any one of a selection of baseline targets. It is considered to not work if it only returns failures.

My RIPE NCC - RIPE NCC Upcoming Courses List ...

Did you ever attend one of our Basic or Advanced IPv6 Training courses? There's a good chance you did. In 2016, we organised 48 face-to-face IPv6 training courses, almost one every week. Every week, we receive requests for more IPv6 training courses in our region. The demand is high and the capacity of our training team is limited.

IPv6 Train the Trainer — RIPE Labs

RIPE community policy in short The first IPv6 Assignment and Allocation Policy in our service region was ripe-196, published on the 20 July 1999. This was a provisional joint document, shared with APNIC and ARIN, to ensure that IPv6 addresses would be managed with consideration to the long-term interests of the global Internet community.

We're Running out of IPv6 (And That's a ... - RIPE Labs

Another advantage of IPv6 is its simplified routing, as there is no need to fragment packets. Most OSs are ready for IPv6. Smart devices are ready as well. However, some older hardware is not compatible with IPv6, so a lot of Internet service providers out there will have to support both implementations of the protocol. What's next?
