Information about Earth systems is gathered by a constellation of global Earth-observing satellites, instruments aboard the International Space Station, airborne science campaigns, and through ground observations. These datasets help monitor, track, and compare COVID-19-driven changes to Earth systems over time.

The raster data model consists of rows and columns of equally sized pixels interconnected to form a planar surface. These pixels are used as building blocks for creating points, lines, areas, networks, and surfaces (Chapter 2 "Map Anatomy", Figure 2.6 "Map Overlay Process" illustrates how a land parcel can be converted to a raster representation).). Although pixels may be triangles, hexagons ...
