book at any time by clicking on the My Google eBooks link. You'll find that link on just about every page in the Google eBookstore, so look for it at any time.

Forensics Lab Flame Tests

Flame tests can also be used to determine the presence of metal elements in water by measuring the spectrum produced by the metals exposed to flame. The water is vaporized and then the emissions of the vaporized metals can be analyzed. However, as useful as it is to forensic analysis, the flame test does not work on all elements.

Students will be able to: 1) use a burn test to classify fibers; 2) determine the identity of an unknown fiber using dye tests.

Motivation: Two fiber samples were found at a crime scene: one is a plain white cotton fiber, and the other is a purple fiber that is synthetic blend of 60% polyester and 40% rayon. Which of these two fibers can be individualized?
