This addition is written mathematically by using the vector expression.  $P = F_1 + F_2$ . From mathematics, it is known that every vector equation can solve for two unknown scalar quantities. Hence, in the solution of this equation, two unknowns can be determined. The two unknowns are normally the magnitude and direction of the resultant force P.

## **Chapter 3 • Integral Relations - Simon Fraser University**

In physics, a force is an influence that can change the motion of an object. A force can cause an object with mass to change its velocity (e.g. moving from a state of rest), i.e., to accelerate. Force can also be described
