Muscular System Quizzes • Anatomy & Physiology

The movement of these muscles is directed by the autonomic part of the nervous system—those are the nerves that control organs. Learn how many muscles are in the body, how skeletal muscle attaches to bone and moves bones, and which organs include smooth muscles.

Muscular system | Learn Muscular Anatomy

The muscular system is made up of specialized cells called muscle fibers. Their main function is contractibility. Muscles, connected to bones or internal organs and blood vessels, are in charge for movement. Almost every movement in the body is the outcome of muscle contraction.

Muscular System Anatomy and Physiology - Nurseslabs

The muscular system is an organ system consisting of skeletal, smooth and cardiac muscles. It permits movement of the body, maintains posture and circulates blood throughout the body. The muscular systems in vertebrates are controlled through the nervous system although some muscles (such as the cardiac muscle) can be completely autonomous. Together with the skeletal system in the human, it ...
